David Almeida

Senior Full Stack Developer · TypeScript · React / Next.js · Node.js · PostgreSQL · AWS

Rio de Janeiro, RJ – Brazil (available for 100% remote work) | +55 (21) 99115-8960 | davidasj21@gmail.com | linkedin.com/in/david-almeida-sj | github.com/davidalmeidasj

PROFESSIONAL SUMMARY

Software engineer with over 11 years of experience, working in the field since 2014 at mid-size and large companies. I work full stack with **TypeScript end to end**: **React and Next.js** (App Router, Server Components and Server Actions) on the frontend and **Node.js, Express.js and NestJS** on the backend, building RESTful and GraphQL APIs with strict typing and validation through **Zod**. Solid polyglot background in **Java and Kotlin (Spring)**, **PHP (Laravel)** and **Python**, with a track record of modernizing legacy systems. Consistent practice of **Clean Architecture, DDD, the repository pattern and SOLID** in **monorepo** architectures, on top of **PostgreSQL**, MySQL, MongoDB and the **Supabase** ecosystem (Auth, RLS, Storage). Experience orchestrating **background queues** (BullMQ, Redis, AWS SQS, Celery), **Docker** and **AWS cloud** infrastructure, including **serverless architecture with SST**, as well as integrating **LLM / generative AI APIs** with the **Vercel AI SDK**. Strong automated testing culture (**Jest, Vitest, Playwright**, Testing Library, Cypress), good logging, resilient error handling and *blast radius* assessment before touching a critical system.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript (ES6+), SQL, Java, Kotlin, PHP, Python

Frontend: React, Next.js (App Router, Server Components, Server Actions, SSR/ISR), Vue 3 / Vuex, AngularJS, React Native (white-label, build flavors, CodePush, App Store and Google Play releases), Redux / Redux-Saga, Zustand, React Query, React Hook Form, Tailwind CSS, in-house Design System, Styled-Components, Sass/Less, Three.js, i18n, accessibility and responsiveness, prototyping in Figma

Backend: Node.js, Express.js, NestJS, Server Actions, RESTful APIs, GraphQL / Apollo, WebSockets, Spring (Java/Kotlin), Laravel (PHP), Zod, JWT / OAuth2, multi-tenant RBAC

Data: PostgreSQL, MySQL, MongoDB, Redis, Supabase (Auth, Row Level Security, Storage), TypeORM, Prisma, relational modeling, query tuning and migrations

Architecture: Clean Architecture, Domain-Driven Design, repository pattern, SOLID, monorepo (Turborepo / workspaces), API contract design, multi-tenant

Queues, AI and integrations: BullMQ, Redis, AWS SQS, Celery (Python), workers and asynchronous jobs, background processing, LLM / generative AI API integration, Vercel AI SDK, webhooks and third-party system integrations

Cloud and DevOps: AWS (ECS, ECR, S3, RDS, Lambda, API Gateway, EC2, CloudFront, Route 53, Athena, Amplify, CloudWatch, IAM), serverless architecture, SST (Serverless Stack), Docker, Terraform, Vagrant, Jenkins (Blue Ocean), Bitbucket Pipelines, GitHub Actions, GitFlow, Vercel

Quality: Jest, Vitest, Playwright, Cypress, React Testing Library, TDD / BDD, SonarQube, code review, conventional commits, structured logging, observability and error handling

Ways of working: Scrum, Kanban, Jira, collaboration with lean teams and participation in architecture decisions

PROFESSIONAL EXPERIENCE

Full Stack Software Engineer · Provider IT

September 2024 – Present | Remote

Two products in production: a multi-tenant digital signage SaaS platform (TypeScript monorepo: NestJS/Node.js API + React SPA + Android app) and a white-label mobile application in React Native.

- I build **end-to-end features** in a TypeScript monorepo, applying **Clean Architecture, DDD and the repository pattern** with TypeORM over relational databases, keeping domain, application and infrastructure layers decoupled.
- Designed the **asynchronous report generation pipeline** (background queue, workers, SHA-256 hash cache and S3 upload with client-side polling), **eliminating the 504 Gateway Timeouts** from the load balancer on heavy reports and deduplicating reprocessing for 7 days.
- Cut catalog synchronization time from **379s to 18s (~95%)** after end-to-end profiling exposed a transactional bottleneck in batch writes.
- Diagnosed and fixed a **cache stampede** (*thundering herd*) that took the application down in production on every TTL expiration, in an autonomous investigation from the user-facing symptom to the root cause.
- Implemented **defense-in-depth authorization**: rule-based guards on the backend plus route and UI protection on the frontend, with server-side revalidation on every navigation, guaranteeing isolation between tenants.
- Structured **observability and resilient error handling** (global exception filter, persisted logs and automatic Slack alerting) and maintain **automated test coverage with Jest and Playwright** (E2E), with QA evidence for every delivered flow.
- Work across **AWS and Docker** (ECS/ECR, RDS, S3, Lambda, Amplify, Terraform, Bitbucket Pipelines): fixed a *health check* misconfiguration that kept the previous version live after deploys, and led a cost optimization effort across the account.
- Build SPAs in React, Next.js and Vue.js with state management (Redux, Redux-Saga, Zustand, useReducer), integration through GraphQL, REST and WebSockets with OAuth2, and asynchronous scripts in **Python with Celery**, plus the native Android front in Kotlin.
- I develop a mobile application in **React Native and TypeScript** under a **white-label** architecture: a single codebase producing **five apps for distinct brands** through *build flavors* on Android and *schemes* on iOS, each with its own identifier, versioning and signing, **published and versioned on the App Store and Google Play**.
- In the same app: React Navigation, **React Query** with a persisted cache for offline use, React Hook Form, i18next, Reanimated, Vision Camera and biometric authentication, plus **over-the-air delivery (CodePush)**, observability with **Firebase** (Crashlytics, Analytics and Performance) and **Datadog RUM**, *on-device* Storybook and tests with Jest and Testing Library.

Full Stack Software Engineer · DBC Company

March 2023 – September 2024 | Remote

- Development of SPAs in Vue.js/Vuex and React, with state management through Reducer and Saga and a focus on perceived performance.
- Led the stack modernization with the migration to **React 18**, enabling Suspense and Concurrent Rendering, and designed the project's testing architecture.
- Backend services in Node.js (Express), PHP (Laravel) and Java/Kotlin (Spring), integrating GraphQL, REST and WebSockets with OAuth2 authentication.
- Unit tests with Jest and Testing Library and end-to-end tests with Cypress, in a TDD/BDD workflow, reaching production-level coverage.
- Mobile applications in React Native, with navigation, REST API consumption and automated tests.

Full Stack Developer · Helpvino

November 2021 – February 2023 | São Paulo

- SPAs in React.js with Redux/Saga, integration of REST and GraphQL APIs authenticated with OAuth2, real-time WebSockets and unit tests with Jest and Testing Library.
- Led the project's modernization: **CI/CD pipelines with Jenkins and Blue Ocean**, automated coverage with Cypress and Jest and code quality analysis with **SonarQube**.
- Led the migration to **AWS**, configuring EC2, CloudFront, S3 and Route 53 with a focus on scalability, security and cost optimization, and integrated external APIs and payment gateways.
- Mobile applications in **React Native**, consuming the same REST and GraphQL APIs as the web product.

Full Stack Developer · ControlLab

March 2015 – October 2021 | Rio de Janeiro

- Backend in Node.js, Kotlin/Spring and PHP (Laravel), with GraphQL, WebSockets, MongoDB and relational databases; maintenance and modernization of legacy systems.
- Frontend in React and AngularJS with TypeScript and Redux-Saga, scalable CSS (LESS/Sass) and mobile with Kotlin and React Native, sharing logic between web and mobile.
- Architecture and development of multiple systems from the ground up, applying TDD and BDD from day one and standardizing SQL and NoSQL integrations.
- DevOps: environments with Docker and Vagrant and continuous integration with Jenkins.

PHP Developer · Instituto de Segurança Pública

March 2014 – March 2015 | Rio de Janeiro

- Development and maintenance of web applications in PHP, system integration, security practices for data protection and technical documentation, working with multidisciplinary teams.

EDUCATION

Technologist Degree in Systems Analysis and Development · Universidade Veiga de Almeida, Rio de Janeiro
